

Application of cooling water pipes for electric energy storage

What is a composite cooling system for energy storage containers?

Fig. 1 (a) shows the schematic diagram of the proposed composite cooling system for energy storage containers. The liquid cooling system conveys the low temperature coolant to the cold plate of the battery through the water pump to absorb the heat of the energy storage battery during the charging/discharging process.

What is a cooling pipe design scheme?

An innovative cooling pipe system design scheme is proposed, utilizing a coupled non-uniform spacing arrangement tailored to meet the heat dissipation requirements of different sections within the battery pack.

What is a liquid cooling thermal management system?

The liquid cooling thermal management system for the energy storage cabin includes liquid cooling units, liquid cooling pipes, and coolant. The unit achieves cooling or heating of the coolant through thermal exchange. The coolant transports heat via thermal exchange with the cooling plates and the liquid cooling units.

What is a 5MWh liquid-cooling energy storage system?

The 5MWh liquid-cooling energy storage system comprises cells, BMS, a 20'GP container, thermal management system, firefighting system, bus unit, power distribution unit, wiring harness, and more. And, the container offers a protective capability and serves as a transportable workspace for equipment operation.

How does a liquid cooling pipeline work?

The liquid cooling pipeline operates in a closed loop. The coolant, propelled by a pump, circulates through the cold plate, exchanging heat with the batteries, which raises its temperature. It then flows into the return water pipeline, entering the evaporator.

How does a convection cooling system work?

By adjusting heat dissipation across regions, it optimizes the design coupling of cooling pipes and coolant, enabling efficient thermal management. Due to the principle of natural convection, this system is limited in its application under high energy density and high discharge rate conditions.
