

Does Austria have a reliable electricity supply network?

Austria has a highly reliable electricity supply network- thanks mainly to a diversified mix of energy sources which ensures that generating capacity can be put to optimum use at any time. This section of our website tells you everything you need to know about the Austrian electricity system.

What are the main themes of the Austrian electricity system?

Overview of the Austrian electricity system. Themes: Green electricity, security of supply, grid stability, European electricity system, digitization, energy efficiency, electricity market, e-mobility, electromobility, sector coupling, renewable energies, electricity generation, hydropower, photovoltaics, wind power

Who is Austria Energy Group?

The Austria Energy Group was founded in Vienna, Austria in 2006, where its headquarter is located with subsidiaries and offices in Europe and Latin America. Since its commencement, the Group has been focused on the site development and technology integration, construction (EPCM), operation and management of renewable power plants.

What if Austria didn't have electricity?

Taking wind, biomass and solar into account, renewable power generation rises to more than three-quarters of the country's total electricity production. Austria's last coal-fired power plant closed back in 2020. Without electricity, modern-day life would grind to a halt.

Does Austria have a high-voltage transmission system?

More than 30 countries form the integrated system, and Austria is one of them. High-voltage lines transmit electricity over large distances, and national transmission system operators (TSOs) work around the clock to ensure that the system remains in equilibrium. Plans are in place to make the European electricity network smarter in the future.

Does Austria have an above-average gas supply?

The Austrian Energy Agency has analysed which energy policy strategies, decisions and measures from 1945 to 2020 led to Austria's above-average exposure to gas supplies and which lines of argument have become established over the decades. Last but not least, it shows which conclusions can be drawn for the future and used for a new risk assessment.

However, the "renewables" only made up 32.7% of the total energy consumption. 78.2% of electricity came from renewable energy sources. Austria last had a minimal export surplus in 2000. Since then, the country has grown into a net importer of electricity. Energy-saving measures are therefore not only useful for reasons of climate protection.
