

Average household energy storage price per 5MWh in Germany

How much does a kWh cost in Germany?

Data was collected from the suppliers operating in Germany on the prices for household customers as at 1 April 2024. There was a decrease in the average price (including VAT) to 41.59 ct/kWh(2023: 45.19 ct/kWh).

How many home storage units are there in Germany?

In 2020, more than 100,000 home storage units were implemented across Germany, bringing the total number to 300,000. In 2018, photovoltaic (PV) and energy-storage for households reached grid-parity: storing PV energy with batteries became cheaper than the price from the public power network.

How big is the energy storage industry in Germany?

With a turnover of over 15.7 billion euros, and a 46 percent growth increase in comparison to 2022, the energy storage sector's expansion in Germany continues at a fast pace, according to industry data released by the German Association of Energy Storage Systems (BVES).

Why do we need energy storage systems in Germany?

Increasing the share of renewables poses new challenges: Excess energy produced during off-peak hours needs to be stored and made available when needed. Since energy storage systems (ESS) can balance supply and demand, they are an essential part of Germany's energy transition. In line with this, the market for ESS is constantly growing.

How is the average electricity price calculated in Germany?

This average is calculated by weighting the prices for the individual contract models for an annual consumption of 2,500 kWh to 5,000 kWh to obtain a reliable indicator for the electricity price for household customers in Germany.
