How much does cobalt cost in 2022?

For example, the price of cobalt has fallen from roughly \$70,000 per metric ton in 2022 to about \$30,000 in 2024. Similarly, the price for lithium carbonate has fallen from a high of approximately \$70,000 per metric ton to well below \$15,000 in 2024.

Why are nickel-metal hydride batteries expensive?

Nickel-metal hydride batteries exhibit relatively high raw material cost due to large amounts of nickel. These batteries are also subject to commodity price fluctuations of nickel, leading to pack cost of 250 USD/kWh in the worst case.

Are lithium and cobalt prices market-reflective?

This includes benchmark prices for lithium and cobalt, two battery materials that continue to experience market volatility and supply/demand imbalances. Our widely used prices are market-reflective, assessing both the buy- and sell-side of transactions.

How much does a lithium carbonate battery cost?

Similarly, the price for lithium carbonate has fallen from a high of approximately \$70,000 per metric ton to well below \$15,000 in 2024. This article focuses primarily on two of the most sought-after Li-ion battery cathode chemistries in the automotive industry today -- NCM811 and lithium iron phosphate (LFP) batteries.

Does raw material cost affect lithium-ion battery pack prices?

The analysis shows that each material only contributes a minor share to total raw material cost. In addition, total raw materials cost only constitute a share of total product price. The cost increase of one raw material will therefore only have a limited impact on lithium-ion battery pack prices.

It represents only lithium-ion batteries (LIBs)--those with nickel manganese cobalt (NMC) and lithium iron phosphate (LFP) chemistries--at this time, with LFP becoming the primary chemistry for stationary storage starting in 2021.
