

Average standalone energy storage price per 2MW in Portugal

Why is storage important for the energy transition in Portugal?

With 21 318 GWh of electricity generated in Portugal between January and June 2022 - 57% of which of renewable origin - storage will be decisive for the much-desired energy transition for two major reasons. On one hand, storage will offset the intermittent generation of renewable energy.

What is the energy storage capacity in Portugal?

Energy storage installed capacity in Portugal is still predominantly based on hydropower pumping, which is today over 3 GW, and will increase to 4,164 GW when the Alto-Tmega dam is completed this year. However, this paradigm is about to shift with the democratization of energy storage solutions with wind and solar production.

Why is renewable capacity important in Portugal?

Now that Portugal is increasingly decommissioning fossil fuel plants, the need to ramp-up the growth and expansion of renewable installed capacity is being brought into sharper focus. Similarly, the need to invest in suitable alternatives and instruments to optimize renewable capacity is also becoming increasingly important.
