

# Cook Islands youtube solar generator

Renewable energy in the Cook Islands is primarily provided by solar energy and biomass. Since 2011 the Cook Islands has embarked on a programme of renewable energy development to improve its energy security and reduce greenhouse gas emissions, with an initial goal of reaching 50% renewable electricity by 2015, and 100% by 2020. The programme has been assisted by ...

The 15 islands of the Cook Islands lie halfway between New Zealand and Hawaii, scattered like fragrant frangipani petals floating across 2.2 million square kilometres of marine-protected ocean.

The Cook Islands is a net importer of energy, in the form of petroleum products. Total energy consumption was 1,677,278,000 BTU (1.77 TJ) in 2017, of which 811,000,000 (0.86 TJ) was in the form of oil. [1] In 2012 47% of imported oil was used in the transport sector, 30% in aviation, and 27% for electricity generation. [2] Electricity consumption is 31.6 GWh, from 14 MW of ...
