Should I buy a victron or Xantrex solar inverter?

High idle consumption. If you wish to have your inverter on 24/7, you may want to invest in a victron or xantrex (but they will cost 3x-5x as much money). Because the idle consumption is high on these all-in-ones, you will need at least 400 watts of solar panels attached to your system to offset the loss.

How many Watts Does a solar inverter need?

Because the idle consumption is high on these all-in-ones, you will need at least 400 wattsof solar panels attached to your system to offset the loss. If you do not plan to have your inverter on 24/7, this is not a problem. Some models have a lower solar panel array input voltage (usually 60-148VDC).

Can a solar inverter be used 24/7?

If you do not plan to have your inverter on 24/7, this is not a problem. Some models have a lower solar panel array input voltage (usually 60-148VDC). If you plan to connect a large solar array, you will probably need to put your panels in parallel to keep the voltage down.
