

Dominican Republic power vault 21000

How is electricity generated in the Dominican Republic?

Electricity generation in the Dominican Republic is dominated by thermal units fired mostly by imported oil or gas (or liquefied natural gas). At the end of 2006, total installed capacity of public utilities was 3,394 MW, of which 86% was fossil fuels and 14% was hydroelectric. The detailed share for the different sources is as follows:

Why does the Dominican Republic have a blackout?

The transmission system in the Dominican Republic is weak and overloaded, failing to provide reliable power and causing system-wide blackouts. East-west and north-south transmission lines need to be reinforced in order to deliver electricity to the capital and northern regions and to transmit power from the new power plants in the eastern region.

What was the Dominican power sector like before the 1990s?

Prior to the 1990s reform, the Dominican power sector was in the hands of the state-owned, vertically-integrated Corporación Dominicana de Electricidad (CDE). The operation of the company was characterized by large energy losses, poor bill collection and deficient operation and maintenance.

Why is the electricity sector in the Dominican Republic in crisis?

As previously described, the precarious situation of the electricity sector in the Dominican Republic is not caused primarily by limited generation capacity. Although a reduction of losses may provide a more economic way of resolving the crisis, there are plans for significant new investments in new generation capacity, especially in hydropower.

How many CDM projects are there in the Dominican Republic?

Currently (December 2007), there is just one registered CDM project in the electricity sector in the Dominican Republic, the El Guanillo wind farm, with estimated emission reductions of 123,916 tCO₂e per year. The World Bank is currently financing a Power Sector Technical Assistance Project.

Is the Dominican Republic's power sector a bottleneck to economic growth?

The power sector in the Dominican Republic has traditionally been, and still is, a bottleneck to the country's economic growth.
