

What are energy storage technologies?

Informing the viable application of electricity storage technologies, including batteries and pumped hydro storage, with the latest data and analysis on costs and performance. Energy storage technologies store energy either as electricity or heat/cold, so it can be used at a later time.

Which energy storage technologies are included in the 2020 cost and performance assessment?

The 2020 Cost and Performance Assessment provided installed costs for six energy storage technologies: lithium-ion (Li-ion) batteries, lead-acid batteries, vanadium redox flow batteries, pumped storage hydro, compressed-air energy storage, and hydrogen energy storage.

Are battery electricity storage systems a good investment?

This study shows that battery electricity storage systems offer enormous deployment and cost-reduction potential. By 2030, total installed costs could fall between 50% and 60% (and battery cell costs by even more), driven by optimisation of manufacturing facilities, combined with better combinations and reduced use of materials.

How does storage affect electricity prices and emissions?

Electricity prices drop the most when storage participates in the real-time market, while emissions decrease the most when storage participates in the day-ahead market. However, Qin et al. also find that as total storage capacity increases from 1 to 5 gigawatts (GW), the marginal price and emissions impacts diminish.

What are the most common uses for energy storage in 2022?

Frequency regulation, spinning and ramping reserves, and energy arbitrage were the most common uses for energy storage in 2022. California and Texas both follow these product trends. Figure 10. Applications Served by Utility-Scale Battery Storage, 2022 Source: EIA (2023a).

Will additional storage technologies be added?

Additional storage technologies will be added as representative cost and performance metrics are verified. The interactive figure below presents results on the total installed ESS cost ranges by technology, year, power capacity (MW), and duration (hr).
