

Energy storage policy falls short of expectations

How effective is energy storage policymaking?

Yet the most effective approaches to energy storage policymaking are far from clear. This report, published jointly by Sandia National Laboratories and the Clean Energy States Alliance, summarizes findings from a 2022 survey of states leading in decarbonization goals and programs.

Should energy storage investors and policymakers consider incentive policies?

Furthermore, the findings of this study are particularly helpful for energy storage investors and policymakers, not only in China but also in other countries. For example, before designing incentive policies for the energy storage industry, policymakers should consider the intended effect of policy interventions on their targets.

Are energy storage subsidy policies uncertain?

Subsidy policies for energy storage technologies are adjusted according to changes in market competition, technological progress, and other factors; thus, energy storage subsidy policies are uncertain. In this section, the investment decision of energy storage technology with different investment strategies under an uncertain policy is studied.

Does the energy storage strategic plan address new policy actions?

This SRM does not address new policy actions, nor does it specify budgets and resources for future activities. This Energy Storage SRM responds to the Energy Storage Strategic Plan periodic update requirement of the Better Energy Storage Technology (BEST) section of the Energy Policy Act of 2020 (42 U.S.C. § 17232 (b) (5)).

Why is DOE investing in energy storage?

The underlying motivation for DOE's strategic investment in energy storage is to ensure that the American people will have access to energy storage innovations that enable resilient, flexible, affordable, and secure energy systems and supply, for everyone, everywhere.

What challenges do energy storage resources face?

Energy storage resources present a distinct set of challenges given their unique nature: unlike conventional or renewable generation, energy storage resources must be charged with electric power, which will sometimes (but not always) be provided by the offtaker.

This is an extract from a recent report "Charging Up: The State of Utility-Scale Electricity Storage in the United States" by Resources for the Future. As the electricity sector ...

Our policy recommendations are intended to remove barriers to deployment, unlock value drivers, and

Energy storage policy falls short of expectations

accelerate private sector demand for LDES technologies.
