

Energy storage terminal copper parts processing energy storage connector

How do I connect my energy storage system?

Install your energy storage systems quickly, safely, and cost-effectively for applications up to 1,500 V - with pluggable battery connections via busbar connection or via battery pole connector. Benefit from the advantages of both connection technologies for front or rear connection.

How to connect a busbar to an energy storage system?

Connectors for connecting to the busbar simplify the installation of slide-in systems in energy storage systems. The connectors with reverse-polarity protection are plugged onto the rear side of a storage system and are suitable for system voltages up to 1,500 V.

Why do we need special connection technology for battery storage systems?

Special connection technology optimized for use in storage systems is required in order to connect these storage systems quickly, safely, and efficiently. Busbar connections and battery-pole connectors for battery storage systems are safe and cost-effective. Find out more here in the video.

Why do we need energy storage systems?

Energy storage systems enable the self-consumption of renewable energy regardless of when it is generated. They therefore make a significant contribution to alleviating the load on power grids and support the integration of renewable energy into the power grid.
