How to protect battery energy storage stations from fire?

High-quality fire extinguishing agents and effective fire extinguishing strategies are the main means and necessary measures to suppress disasters in the design of battery energy storage stations . Traditional fire extinguishing methods include isolation, asphyxiation, cooling, and chemical suppression .

Are LFP batteries safe for energy storage?

Fire accidents in battery energy storage stations have also gradually increased, and the safety of energy storage has received more and more attention. This paper reviews the research progress on fire behavior and fire prevention strategies of LFP batteries for energy storage at the battery, pack and container levels.

Why do energy storage systems have a high risk of fire?

This is due to the rapid development of the energy storage industry and the continuous expansion of capacity demand. The number of large-capacity energy storage systems has increased, and the probability of accidents has increased. There have been many fire accidents of BESS in United States, Australia and China .

What is a battery energy storage container (BESC)?

Battery clusters are connected in series or in parallel and equipped with supporting devices (such as current converters, fire extinguisher, etc.) to form the battery energy storage container (BESC) . Fig. 1. Schematic diagram of the battery energy storage system components.

What happens if a storage container catches fire?

In the case of energy storage at the container level, if one experiences TR, it can propagate to the entire energy storage container, causing violent fires and explosions. In recent years, there have been frequent fire accidents in LIB storage containers, causing significant economic losses and even casualties (Lai et al., 2022).
