

# Government procurement price of solar plus storage in Vietnam

What does Vietnam's Solar Policy update mean for energy storage?

Vietnam's solar policy update highlights growing role of energy storage. (Photo: iStock) Vietnam's Ministry of Industry and Trade (MOIT) has announced a new round of feed-in tariffs (FIT) for solar power, introducing location-based pricing and, for the first time, incorporating energy storage systems.

How much does a solar plant cost in Vietnam?

Vietnam's Ministry of Industry and Trade (MOIT) has published the new feed-in tariffs for utility-scale solar plants. For projects without battery storage, the tariff will be VND 1,382.7 (\$0.053)/kWh for the northern part of the country, VND 1,107.1/kWh for the central part, and VND 1,012.0/kWh for the southern region.

What are the conditions for solar storage in Vietnam?

Conditions for systems with storage include a minimum storage capacity of 10% of the solar plant's installed capacity, a charge/discharge time of 2 hours, and at least 5% of total generation used for charging the storage system. Overall, projects with storage receive higher FIT rates. Previously, Vietnam's FITs were relatively low.

Why should Vietnam invest in solar power?

Vietnam can leverage domestic solar manufacturing to meet domestic demand, implement direct power purchase agreements (DPPAs) enabling private renewable supplies, accelerate grid and battery storage infrastructure, and avoid costly LNG imports by prioritizing renewables.

Why has the Vietnamese government temporarily suspended solar projects?

To address the rapid growth and grid capacity issues, the Vietnamese government has temporarily suspended new approvals for large-scale solar projects. This measure aims to manage the grid's ability to integrate new capacity and transition from the FIT scheme to an auction-based system for project approval and pricing.

How has the FIT program impacted solar power development in Vietnam?

The FIT program has been a major driver of solar power development in Vietnam, offering a tariff of 9.35 cents per kilowatt-hour (kWh) for projects completed by June 2019. This program led to a surge in solar capacity, reaching 4.46 gigawatts of new installations.

The Philippine government has officially launched the fourth round of its Green Energy Auction (GEA-4), announced today by the Department of Energy (DOE). This auction introduces a groundbreaking feature: the ...

This Insight comes to you at the turning of the tide: after a period of increased pricing and supply chain disruptions, we are starting to see a return to reliable supply and declining prices in the battery energy storage

# Government procurement price of solar plus storage in Vietnam

markets. ...

5 &#0183; - The Ministry of Industry and Trade has just issued decisions approving the electricity generation price framework for hydropower plants, natural gas-fired combined cycle thermal ...

Vietnam's Ministry of Industry and Trade (MOIT) has announced a new round of feed-in tariffs (FIT) for solar power, introducing location-based pricing and, for the first time, incorporating energy storage systems.

The Philippines's first hybrid solar-storage plant, completed in 2022 with developer ACEN adding a 60MW/120MWh BESS to a 120MW solar PV plant inaugurated the ...

The Vietnam Commercial Solar Storage Market is experiencing accelerated growth due to the convergence of multiple key drivers. One of the foremost factors is the ...

Solar energy plays a significant role in the federal government's strategy for renewable and efficient energy. Because solar systems produce energy on site, they involve unique issues and processes. They include connecting the solar ...

As global costs for solar, wind, and battery storage systems fall, Vietnam could replace fixed feed-in tariffs (FiTs) with standardized competitive auctions to procure clean energy at the lowest cost.

Last week, our Managing Director Thomas Jakobsen joined two high-level panels at the annual Solar & Storage Live Vietnam 2025, sharing practical insights into ...

There is currently no specific legal framework for installation of storage systems for solar projects in Vietnam. Under Decision No. 13, the Prime Minister instructed EVN to &quot;study on investments ...

As one of our first contributions, we are making a toolkit available that provides guidance to policymakers and project developers on best practices for implementing solar-plus ...

This framework, issued by the MOIT, ensures transparency and consistency in pricing, serving as the foundation for agreements between power generation units and Electricity of Vietnam ("EVN").

The government has lifted a regulation requiring all consumers of power to purchase it at fixed prices from the state utility EVN. Vietnam will let electricity-guzzling ...

Vietnam's Ministry of Industry and Trade (MIOT) aims to open up Vietnam's electricity market to bilateral power purchase agreements (PPAs) through a pilot scheme that would, for the first time ...

Vietnam needs to consider the development of battery energy storage system (BESS) while the country is on a

# Government procurement price of solar plus storage in Vietnam

path towards promoting renewable energies to ensure energy security and sustainable ...

At the same time, the demand for battery energy storage systems (BESSs) is accelerating, driven by Vietnam's abundant renewable energy (RE) potential, particularly in solar and wind power.

Vietnam's Ministry of Industry and Trade (MoIT) has announced new feed-in tariffs (FiTs) for utility-scale solar power plants, tailored to different regions and project types. ...

Explore Vietnam's booming solar power industry: growth drivers (FiT), challenges (grid congestion), key policies (PDP8), and solar panel trade regulations.

The Vietnamese Government has introduced a new electricity decree, as an extension of the country's 2024 "New Electricity Law", to accelerate the development of ...

Since storage is a developing technology, local governments may encounter challenges in deploying storage. The energy landscape is constantly changing, and policy processes must ...

"The 20 per cent offtake will shorten the payback period for investors and accelerate self-use rooftop solar power installations at a moderate level while avoiding policy abuse and overdevelopment," said Do Quang ...

Vietnam's solar power industry has grown rapidly since 2017, driven by generous feed-in tariffs and strong government support. The country now has one of the highest installed solar capacities in Southeast Asia, ...

Solar-plus-storage shifts some of the solar system's output to evening and night hours and provides other grid benefits. NREL employs a variety of analysis approaches to understand the factors that influence solar-plus ...

To help provide perspective on current market conditions, the report also provides modeled market price (MMP) analysis, which is more in line with previous benchmark reports, by using ...

Vietnam's power market is evolving from a state-run, single-buyer model to a more flexible, market-driven system. Recent reforms--such as the Vietnam Wholesale ...
