Why do we need reliable energy storage systems?

Reliable energy storage systems to store and distribute the energy are critical to building a balanced energy future we can count on. SLB explores new and better ways to drive energy storage. Through advanced development and deployment of tech and strategic partnerships we help power our future sustainably, reliably, and at scale.

What is a shared energy storage power station?

This project is the first shared electrochemical energy storage power station of SVOLT, with a rated total installed capacity of 50MW/100MWh for the energy storage system. Shared energy storage can reduce the investment cost of new energy projects, play a role in power regulation, and promote the matching of power supply and demand.

Why is energy storage important?

As energy demand increases, secure access to energy when you need it is an imperative. Reliable energy storage systems to store and distribute the energy are critical to building a balanced energy future we can count on. SLB explores new and better ways to drive energy storage.
