

Hybrid solar storage cost vs benefit calculation in Yemen

Is solar PV a good option in Yemen?

Whatever solar PV energy systems are recently used in Yemeni urban and rural, it is still unreliable and inefficient in terms of inappropriate design and configuration due to the lack of renewable energy experts and renewable energy institutes to play a key role in raising the level of trainees and conducting studies on related systems [62,63]. 3.

Which energy storage unit is used in a hybrid system?

In the hybrid system, the energy storage unit is the Surrrette 6 CS 25P, due to its availability in different scales, appropriate cost, durability recognized in solar applications, and mobility endurance in remote applications. The technical and economic specifications are collected from the manufactory related sheet [89,90].

What are the long-term strategies for energy supply in Yemen?

The Government of Yemen (GOY) has established long-term strategies in the energy sector, considering the hypothesis that the economic and the GDP increase slowly. The strategy (1) is to supply 1.10 kWh/day/capita. The strategy (2) is to supply 2 kWh/day/capita, which is 50% of the average electrical energy/capita of other Arab countries.

Will Yemen's Solar Revolution be able to supply power to 75% of households?

It could be able to supply power to 75% of households in urban areas and 50% in rural areas. Indeed, Yemen's solar revolution was born by necessity when fuel shortage and public grid damages have become unfeasible.

How stable is the finance system in Yemen?

The finance system in Yemen is not stable due to the conflict. The variation of the real interest rate is selected to check the system outcomes. When the actual real interest rate is 0.24%, the result shows that the NPC and COE were 6.39 billion dollars and 0.175 dollars/kWh, respectively.
