What is energy storage charging pile management system?

System Architecture Design Based on the Internet of Things technology, the energy storage charging pile management system is designed as a three-layer structure, and its system architecture is shown in Figure 9. The perception layer is energy storage charging pile equipment.

What is the energy storage charging pile system for EV?

The new energy storage charging pile system for EV is mainly composed of two parts: a power regulation system and a charge and discharge control system. The power regulation system is the energy transmission link between the power grid, the energy storage battery pack, and the battery pack of the EV.

How to calculate energy storage based charging pile?

Based on the real-time collected basic load of the residential area and with a fixed maximum input power from the same substation, calculate the maximum operating power of the energy storage-based charging pile for each time period:  $(1) P_m(t h) = P_{am} - P_b(t h) = P_{cm}(t h) - P_{dm}(t h)$

Can energy storage battery be added on a traditional charging pile?

For Android system, energy storage charging pile equipment adopts S5P4418 solution in hardware which manufactured by Shenzhen Youjian Hengtian Technology Co., Ltd., Shenzhen, China. In this paper, a high-performance energy storage battery is added on the basis of the traditional charging pile.

How do I control the energy storage charging pile device?

The user can control the energy storage charging pile device through the mobile terminal and the Web client, and the instructions are sent to the energy storage charging pile device via the NB network. The cloud server provides services for three types of clients.

How does mhihho optimize charging pile discharge load?

Fig. 11. Before and after optimization of charging pile discharge load. The MHIHHO algorithm optimizes the charging pile's discharge power and discharge time, as well as the energy storage's charging and discharging rates and times, to maximize the charging pile's revenue and minimize the user's charging costs.
