

This study focuses on the power systems of inland waterway vessels in Chinese Yangtze River, systematically outlining the low-carbon technology pathways for different power ...

This paper systematically analyzes maritime vessels' energy management and battery systems, highlighting advances in lithium-based and alternative battery technologies. ...

The proportion of shore power used by inland river ships in the Yangtze River basin from 2025 to 2060 (Fig. 4 (a)) is predicted based on the reconstruction of ship-power ...

In the context of global carbon peaking and carbon neutrality, new energy is rapidly permeating various facets of human life. Electric vehicles are rapidly increasing, and electric ships are also ...

This should build on established safety guidelines and requirements such as the Guidance on the Safety of Battery Energy Storage Systems onboard ships (from the European Maritime Safety ...

Abstract Zero-emission battery-powered ship is considered the ideal technical solution to achieve emission reduction and energy conservation in inland shipping. However, ...

In order to facilitate the further expansion of electric ships, the advancement of electric ship technology must develop strategies for the rational utilization of the power grid in inland river ...

A battery energy storage system and container ship technology, applied in the field of ships, can solve the problems of water pollution, noise pollution, ecological environment ...

Swappable energy storage systems (containerised battery packs) are an ideal solution for inland waterway vessels. The swappable battery containers are stored and re-charged in locations ...

This should build on established safety guidelines and requirements such as the Guidance on the Safety of Battery Energy Storage Systems onboard ships (from the European ...

Then, the power requirements of inland ships and the characteristics of new power systems are analysed, and on this basis, alternative solutions for inland ship power ...

Electric vessels (EVs) are a viable solution for reducing air pollutants and are an integral part of promoting sustainable maritime transportation and building a greener ...

Inland river vessel energy storage batteries

The maritime industry, a cornerstone of global trade, faces mounting pressure to improve energy efficiency and minimize environmental impact. To address this, a systematic ...

Based on the low-pass filter strategy, the power distribution of the ultracapacitor and lithium battery is distributed. In order to determine the optimal ESS ...

A group of companies launched a new consortium - the Zero Emission Services B.V. (ZES), with the goal to develop zero-emission inland waterway shipping.

This action aims to increase the range of fully-battery-electric operation of waterborne transport vessels on this range of size. Actions addressing these challenges should also align with the ...

First, the lack of financial feasibility is a significant hurdle to growing the battery ship industry. The capital cost of an electric vessel is much higher than a fossil fuel one, which makes the ...

Therefore, an energy management strategy that can minimize the operation cost and guarantee energy use safety is crucial. In this paper, considering the dynamic electricity ...

Demonstrated 40% increase in fully electric long-distance autonomy for maritime vessels above 400 Gross Tonnage (GT) or inland river vessels above 86 meters, using batteries as the ...

Expected Outcome: Project results are expected to contribute to all the following expected outcomes: Demonstrated 40% increase in fully electric long-distance autonomy for maritime ...

The maritime sector is exploring low-cost battery options for vessel propulsion to reduce carbon emissions. Liquid metal battery technology offers a promising alternative to ...

Download Citation | On Sep 1, 2023, Yan Zhang and others published Speed and energy optimization method for the inland all-electric ship in battery-swapping mode | Find, read and ...

On January 21st, China's first batch of inland river new energy methanol single-power vessels kicked off construction. This project is expected to build 50 vessels for water ...
