Being able to grid tie feed like that requires much more control and here in So Cal more certification testing which adds to the cost. Also there is no way to do backup power during an outage if you only connect to the main panel like this. Battery power in a blackout can only be taken from the isolated output terminals. This is true for any ...

battery. I was looking into ways to integrate the panel& battery production into the grid (so no battery charging from the grid, only supply) to 1) Fully utilize the capabilities of the panel/batteries, 2) Mitigate the costs I made on the equipment.

If you go with Enphase, you can install their battery later on easily. If you go with SMA (my recommendation), their battery can easily be added later also. Tesla Power walls can be added to ANY grid tied PV system. There are plenty of other battery systems that will work with any grid tied PV system as well.

Hi all-- I took a gamble on a &quot;new old stock&quot; grid tie inverter from a company that went out of business, and that one just decided to crap out after a year of being hooked up (buuuuu).

A grid tie inverter, an interface device between photovoltaic cells and the power grid, converts solar power into AC power for transmission to the grid. Its role is crucial in photovoltaic grid-connected power generation systems. The document further elaborates on the workings of the inverter, especially during a power outage, and highlights its key features like high efficiency, ...
