The weight of the Powerwall 3 would indicate the same chemistry, LNCM, coming in at just 130.18kg at 13.5kWh. The GivEnergy All in One, a 13.5kWh battery using LFP, comes in at a whopping 173kg. Meaning, even with an integrated inverter, the Powerwall 3 will be almost as energy dense as the Powerwall 2, which uses LNCM.

Powerwall 3 seems intended for cases where people have larger solar systems with less batteries, since the power output is higher but the capacity isn't. For those buying more batteries for the capacity the extra capability if having multiple powerwall 3s is wasted and likely an unnecessary cost. ... I would rather have the improved lifespan ...

LPBF series batteries are made of Grade-A cells, lithium iron phosphate materials, built-in BMS, up to 6 units in parallel, with multiple certificates (UN38.3, CE, MSDS, etc.)

It guarantees better performance and longer life by using Lithium-Ferro-Phosphate (LFP) battery cells instead of the Lithium-Nickel-Manganese-Cobalt (NMC) cells found in Powerwall 2. LFP cells are easier to cool, safer, and boast a longer lifespan while being environmentally less impactful due to their extended lifespan and absence of cobalt.
