

Lifepo4 battery cabinet Mali

The cabinet would be vented to the outside to ensure any smoke/combustion is not released within my garage. For even more protection, I am even considering suspending a large plastic bag of sand over the battery -- in the event of a battery fire, the plastic will melt, dropping the sand onto the battery (another trick learned from charging LiPo's).

if the (LiFePo4) cells experience a failure, gas can come out of the cells and increase pressure in the battery container. many LiFePO4 cells have a "pressure fuse" or vent that helps failure to happen at a "single point"; venting can also refer to "day to day" temperature regulation, to encourage long term cell reliability.

For now, my immediate need is for a battery cabinet to hold 6 or 7 Chevy volt 16s modules. The batteries will be stored indoors in a living space, so they need some physical protection. I have considered "fireproof cabinets" that are typically used to store paints, chemicals, etc., but I'd appreciate some other ideas?
