

Logical analysis of the energy storage industry

What technologies are used in energy storage systems?

TECHNOLOGY RISKS: While lithium-ion batteries remain the most widespread technology used in energy storage systems, these systems also use hydrogen, compressed air, and other battery technologies. The storage industry is also exploring new technologies capable of providing longer-duration storage to meet different market needs.

How did energy storage grow in 2022 & 2023?

The US utility-scale storage sector saw tremendous growth over 2022 and 2023. The volume of energy storage installations in the United States in 2022 totaled 11,976 megawatt hours (MWh)--a figure surpassed in the first three quarters of 2023 when installations hit 13,518 MWh by cumulative volume.

Why do data centers need a high-temperature energy storage system?

Thermal storage and compressed-air energy storage (CAES) suit the region's hot climate and vast salt caverns, spurring exportable know-how in high-temperature storage designs. U.S. data centers could draw 6.7-12% of nationwide electricity by 2028, more than double 2023 levels.

What do Lenders look for in an energy storage project?

OPERATING RISKS: Lenders generally will conduct diligence to understand an energy storage project's operating limitations and operation and maintenance (O&M) costs. As part of that process, lenders will look for an O&M agreement with an experienced operator that will ensure that their project will be managed within its operating limitations.

What are the different types of storage technologies?

Ofgem's non-exhaustive list of technologies that fall within the scope of the regulatory definition of storage include electrochemical batteries (e.g., flow batteries), gravity energy storage (e.g., pumped hydro), air-based storage systems, kinetic energy systems (e.g., flywheels), thermal storage, chemical storage, and electromagnetic storage.

Will IRA monetization help the energy storage industry?

Over the last year and a half, the US Internal Revenue Service (IRS) and Department of the Treasury (Treasury) have released proposed guidance on IRA provisions tied to deployment, manufacturing, and monetization that will be closely watched by the energy storage industry.
