

# Long term savings with Solar Inverter installation 2026

Should you install a solar system before the end of 2025?

Installing your system before the end of 2025 means you can take advantage of the full 30% federal tax credit--possibly reducing your upfront costs and speeding up your return on investment. In states like California, this could mean a payback period of around 7 years instead of 9.

Can I claim a credit for a new solar system?

Yes, you may be able to claim the credit for qualified upgrades, such as adding new solar panels, battery storage, or expanding your system--as long as the additions are installed and paid for before December 31, 2025, and meet the eligibility criteria.

What does a solar installation tax credit cover?

The credit typically covers solar panels, inverters (including Enphase microinverters), battery storage, wiring, mounting hardware, and installation labor. It may also apply to permitting fees, inspection costs, and sales tax in some states. Always check with a tax advisor to confirm which costs are eligible for your specific installation.

What is the new solar tax credit?

This legislation brings significant changes to the federal tax credit for residential and commercial solar and battery systems. Under this new law, homeowners who purchase their systems with cash or a loan will no longer be eligible for the 30% federal tax credit after December 31, 2025. Previously, this solar tax credit was available through 2034.

What does the new solar policy mean for homeowners?

This policy change represents a significant shift in the federal approach to solar incentives for homeowners. But solar energy remains a valuable tool for better managing utility bills, increasing energy independence, and supporting a more resilient power grid.

Who qualifies for a solar system tax credit?

To qualify, homeowners must have purchased the system and incurred qualifying expenses (such as installation or equipment costs) by this date. Homeowners using leases or PPAs--where a third party owns the system--can still benefit from the tax credit until the end of 2027.

With the right solar panels and installation, savings accumulate year after year, making solar a powerful financial decision. Solar Incentives and Tax Breaks in 2025

It costs about \$28,000 to install solar panels. That's a big number, but it can come down significantly with generous incentives from the federal government, as well as from many states.
