

What does NEEAP II mean for Palestine?

CONCLUSION The Energy Efficiency Action Plan for 2020-2030 (NEEAP II) for Palestine puts forward additional opportunities for energy efficiency to reach an ambitious target to reduce total electricity consumption by 500 MWh per year.

What is the main source of energy in Palestine?

Indeed, electricity is the main source of energy in the Palestinian energy mix, and for this source, the residential sector is the main consumer. Other energy sources have their own leading consumption sector. Diesel and gasoline are mainly consumed by the transport sector, LPG by the residential sector.

What sectors are included in the energy balance of Palestine?

The energy balance of Palestine document (2013) identifies only 5 sectors: agriculture, industry, commerce and public services, residential and grid losses. In order to segment the consumption of these sectors, the following methodology has been adopted:

Does Palestine need solar water heaters?

The development of solar water heating is part of this issue since it would decrease the need to use non-renewable energy. Palestine has been a regional leader in the implementation of solar water heaters, but this position is rapidly being eroded.

Which sector consumes the most electricity in Palestine?

In Palestine, the residential sector is the main consumer of electricity with more than 60% of the total consumption. In order to identify pertinent actions, we need to know the consumption by usage. For instance, in the industry sector, main usages are motors or heating/chilling.

Can a natural gas grid be implemented in West Bank and Gaza?

In addition, LPG is imported from Israel where gas fields don't contain a high proportion of LPG. The opportunity to implement a natural gas distribution grid in West Bank and Gaza goes beyond this study. Savings: expected savings are 26 GWh the third year.
