

On grid solar storage cost vs benefit calculation in Indonesia

Can solar energy be a strategy to meet Indonesia's energy goals?

Solar energy can be a strategy to meet this target," said Deon Arinaldo, Program Manager of Energy System Transformation, at the launch of the Indonesia Solar Energy Outlook 2025 study report - Breaking the Walls: The Future of Indonesia's Solar Energy and Energy Storage Innovations (15/10/2024).

How much money does it cost to install solar panels in Indonesia?

Installing 18GW of PV would require \$14.4 billion of investments: This amounts to more than 50 times the \$287 million invested in Indonesian PV deployments over 2005-20. The "pipeline" of PV projects in Indonesia under development today currently totals 2.7GWac. This translates to an estimated \$3 billion investment if all projects are developed.

What are the local content requirements for solar projects in Indonesia?

Indonesia has onerous local-content requirements for solar projects divided by project type (on-grid vs. off-grid) and by components (see Appendix B for details). The local content rules' goal is to have 42.2% of a PV project rely on locally-made equipment but Indonesia's solar industry lacks the maturity and scale required to meet such a target.

Is solar power a good investment in Indonesia?

By October 2019, the RE generation in Indonesia contributes around 13% electricity energy mixed, which is still far below the target. The solar power plant in Indonesia is one of the biggest RE potentials, up to 207.8 GWp. The solar power plant can be built on a large scale, usually called PV farm, and small scale, like PV rooftop.

Could Indonesia adopt a simple approach to solar-plus-storage?

Indonesia could adopt a similarly simple approach to procuring solar-plus-storage. RUPTL 2019-28 estimates that Indonesia will need to install 3.2GW of rooftop PV to raise renewable penetration above 23% from 2025-28, although there is no specific deployment plan by PLN.

How much money does a PV project cost in Indonesia?

The "pipeline" of PV projects in Indonesia under development today currently totals 2.7GWac. This translates to an estimated \$3 billion investment if all projects are developed. Access to capital is not the primary challenge.
