My company is installing a network system in a very remoter location and we must have 8 hours of backup battery power. The backup system must be able to support the following: One router: Power consumption is 160 w max and input current is 4A @ 110VAC One switch: Power consumption is 148 w max and...

The average power consumption is approximately 1000 Watts, and the desired backup time is 8 hours. Calculation Formula: Battery Capacity (kWh) = Power Consumption (kW) x Backup Time (hours) Using the above scenario: Battery Capacity = 1 kW x 8 hours = 8 kWh. For this scenario, a lithium battery with a capacity of 8 kWh would be a suitable ...

Comparatively, partial-home battery backup systems usually store around 10 to 15 kWh. Given that power outages are infrequent in most parts of the country, a partial-home battery backup system is generally all you'll need. But, if your utility isn't always reliable for power, whole-home battery backup may be the way to go.

The battery life of a ups battery backup 8 hours for home depends mainly on its battery capacity, the power of the load device, and the state of battery use. In theory, the backup battery is designed to last for eight hours on a full charge. However, the actual battery life can be affected by a number of factors.
