

Rmt energy New Zealand

How does electricity supply work in New Zealand?

Supplying electricity to homes and businesses across New Zealand involves three key elements: generating electricity, transporting electricity to distribution companies, and then selling it to customers.

How is electricity transported in New Zealand?

Electricity is transported at high voltage (up to 220,000 volts) through a high-voltage alternating current system around New Zealand. To transfer electricity between the North and South Island, there is a high-voltage direct current (HVDC) inter-island cable with a transmission line under the Cook Strait.

Was New Zealand's First power generator a hydro station?

Really, though, it's historic. New Zealand's first power generator was actually a hydro station... but there was concern about what we would do in a drought. Not enough rain means not enough power. Gas and coal (and oil at the time) were cheap and readily available.
