

# Solar telecom Jordan

What is Orange Jordan's solar power purchase deal?

The telecoms operator has signed a private power purchase deal. Jordanian telecom operator Orange Jordan will use a 37 MW solar project to help meet its electricity demand. According to an announcement by the European Bank for Reconstruction and Development (EBRD), the project will be the largest private-to-private solar project in the country.

Will private-to-private solar projects help Jordan meet industrial power demand?

With grid capacity a limiting factor, the Middle Eastern country has moved to foster private-to-private solar projects to meet industrial power demand. The telecoms operator has signed a private power purchase deal. Jordanian telecom operator Orange Jordan will use a 37 MW solar project to help meet its electricity demand.

How much electricity does Jordan have?

Imports make up 90% of Jordan's electricity supply, largely from fossil fuel generation. The country has 800 MW of PV generation capacity installed with 2.2 GW planned by 2021. According to the EBRD, the kingdom has expanded its solar market from 20 MW of capacity to more than 1 GW since 2012.

Solar, China Telecom's self-developed 5GC product, provides 5G network elements based on 3GPP standard, and has customized functions for industrial and other vertical industries, providing a lightweight agile 5G core network with high reliability, low latency, large bandwidth and support for mass access, to meet various wireless communication needs in 5G fully connected smart ...

Umniah, the first telecom operator to launch 5G services officially in Jordan this May, announced significant achievements in expanding its 5G network coverage. Leveraging Ericsson's 64T64R Massive MIMO technology (NASDAQ: ERIC), Umniah expanded its coverage to over 700 sites. Within the initial month of the 5G service launch, the activated ...

In 2019 Orange Jordan consumed 52 GWh having as origin the production of its 3 solar farms. The emission factor of the Jordanian grid was in 2019 of 497g CO<sub>2</sub> /kWh. According to the GHG Protocol, market based assessment, the emission factor used for the electricity coming from solar energy is 0 gCO<sub>2</sub> /kWh. Then the reduced Scope 2 emissions assessed for 2019 ...

A US Trade and Development Agency-funded feasibility study for Nigeria's Hotspot Network Limited has led to the issuance of financing for the deployment of 120 solar-powered rural telecommunications base stations across 22 states in Nigeria.

The Orange telecom solar plants in Jordan are expected to save 40 000 tons of CO<sub>2</sub> emissions per year. According to the US Environment Protection Agency calculations, it would take a million trees to be planted every year to sequester that amount of carbon. Try planting trees in the Jordanian desert and you'll see why that's a big deal.

Jordanian telecom operator Orange Jordan will use a 37 MW solar project to help meet its electricity demand. According to an announcement by the European Bank for Reconstruction and Development (EBRD), the project will be the largest private-to-private solar project in the country.

Kawar Energy completed the largest private-to-private solar wheeling project (37MW) in the Region with Orange Group Jordan, a leading Telecom Operator. The Project was financed by the EBRD and a syndicate of local banks.
