

South Korea windmar home

How is South Korea developing its offshore wind energy sector?

South Korea is making significant strides in developing its offshore wind energy sector. The country's Ministry of Trade, Industry, and Energy (MOTIE) is launching key initiatives to bolster renewable energy capacity, including a public-led project and a comprehensive roadmap aimed at transforming offshore wind in South Korea.

What is wind power in South Korea?

Wind power is a form of renewable energy in South Korea with the goal of reducing greenhouse gas (GHG) and particulate matter (PM) emissions caused by coal-based power. After two oil crises dating back to the 1970s, the South Korean government needed to transition to renewable energy, which encouraged their first renewable energy law in 1987.

Should South Korea invest in offshore wind?

South Korea is not the only market to prioritise wind energy development and offshore wind projects in particular. The EU, for example, is making offshore wind a centrepiece of its climate strategy. It plans to substantially increase its current 12 GW capacity to 60 GW by 2030 and 300 GW by 2050.

Will Shell develop a floating offshore wind farm in South Korea?

Once completed, it will become one of the most significant floating offshore wind projects globally. Through a joint-venture with Korean and Swedish partners, the Dutch fossil fuel giant, Shell, is also considering the opportunity to develop a 1.4 GW floating offshore wind farm near the coast of Ulsan, South Korea.

How will Anma offshore wind power South Korea?

Generating over 1,400 GWh of clean electricity every year, Anma Offshore Wind is expected to provide power to more than 1.4 million South Koreans annually - which is equal to planting and growing over 96 million trees for 10 years to eliminate an equivalent amount of greenhouse gas (GHG) compared to a coal-fired power plant.

What makes the South Korean wind energy transition unique?

The EU, for example, is making offshore wind a centrepiece of its climate strategy. It plans to substantially increase its current 12 GW capacity to 60 GW by 2030 and 300 GW by 2050. The US government also announced a 30 GW offshore wind goal by 2030. What makes the South Korean wind energy transition unique, however, is its tremendous potential.
