

Sri Lanka one our new energy

Will Sri Lanka emerge as a strong economy?

This energy policy in Sri Lanka is expected to pave the way for the country to emerge as a stronger economy with lesser dependence on energy. The focus on a knowledge-fuelled economy will help maintain the energy intensity of the economy at current healthy levels, even in a world that faces frequent energy crises.

Does Sri Lanka have a good energy policy?

Sri Lanka's energy policy is important due to the significant impact of the energy sector on social and economic activities. The country maintains a relatively lower energy intensity of economy, using 0.47TJ of commercial energy to produce one million LKR of GDP. An energy policy consistent with social and economic development goals is required.

Is biomass a source of electricity in Sri Lanka?

Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important source in lower-income settings. Sri Lanka: How much of the country's electricity comes from nuclear power? Nuclear power - alongside renewables - is a low-carbon source of electricity.

Is Sri Lanka a good country?

Sri Lanka is ranked in the mid-range of the United Nations Human Development Index, and its annual GDP per capita is also in the mid-range, at USD 4,065 (2017). The government is intensifying its efforts to reach the upper middle-income level within this decade, which underscores the importance of energy in Sri Lanka's economy.

With our bounty of renewable energy resources for electricity generation, Sri Lanka is best placed to tread this path for the benefit of all, particularly, for the transport sector that is making vast strides the world over.

17. Recognise that nuclear energy has no place or relevance for Sri Lankan energy system, primarily because it lies outside the already accepted principle of developing only generation systems of least economic cost on one hand and to gain non dependence on imported sources of energy. 18.
