Will two solar plants be built in Senegal's southern Casamance region?

DAKAR, Nov 13 (Reuters) - Two solar plants with a combined 60 megawatts (MW) capacity and battery storage will be built in Senegal's southern Casamance region to electrify rural areas, Africa-based project developer Axian Energy said on Wednesday.

How can solar power plants benefit Senegal?

The project estimates that more than 400 jobs in the towns benefit from the existence of the new solar power plants in Senegal. Because Senegal mainly relies on imported oil for electricity, solar power plants offer a more reliable and sustainable green energy source that costs less.

Can Senegal become an emerging economy by 2035?

Senegal's government wants to become an emerging economy by 2035 and the energy sector is one of the major components of Senegal's growth. Rural areas remain the most challenging areas to install power grids. However, with low incomes, rural people struggle to afford the high costs of electricity.

What are the main industries in Senegal?

Another primary industry in Senegal is mining. Senegal's economy rises and falls, following global trends of prices. When export prices fall, farmers suffer the adverse effects since their incomes decrease. Many Senegalese people lack access to education, healthcare and other essential services.
