

Survey on the current status of flywheel energy storage development

What is the future of Flywheel energy storage systems?

The future of flywheel energy storage systems is debatable mainly because its success hinges on several factors. The amount of research and funding put into mechanical batteries, such as the FESS over chemical batteries, will determine the development of this technology.

Can flywheels be used for power storage systems?

Flywheels are now a possible technology for power storage systems for fixed or mobile installations. FESS have numerous advantages, such as high power density, high energy density, no capacity degradation, ease of measurement of state of charge, don't require periodic maintenance and have short recharge times.

What is flywheel energy storage?

The flywheel energy storage is a substitute for steam-powered catapults on aircraft carriers. The use of flywheels in this application has the potential for weight reduction. The US Marine Corps are researching the integration of flywheel energy storage systems to supply power to their base stations through renewable energy sources.

What is flywheel energy storage system (fess)?

Flywheel energy storage system (FESS) is one of the most satisfactory energy storage which has lots of advantages such as high efficiency, long lifetime, scalability, high power density, fast dynamic, deep charging, and discharging capability.

Are flywheel batteries a good energy storage system?

Flywheel energy storage systems are suitable and economical when frequent charge and discharge cycles are required. Furthermore, flywheel batteries have high power density and a low environmental footprint. Various techniques are being employed to improve the efficiency of the flywheel, including the use of composite materials.

Are flywheel-based hybrid energy storage systems based on compressed air energy storage?

While many papers compare different ESS technologies, only a few research [152,153] studies design and control flywheel-based hybrid energy storage systems. Recently, Zhang et al. present a hybrid energy storage system based on compressed air energy storage and FESS.
