Insolight is an energy company that develops and manufactures solar panels. The technology, called planar optical micro-tracking, allows to concentrate sunlight on tiny solar cells, without any tilt. This makes the use of high efficiency space-grade solar cells affordable, whereas normally there are too expensive to be spread on the full sunlit ...

By adding a battery to your solar system, you can store surplus energy generated during the day and use it later, thus reducing reliance on the grid and providing backup power during outages. This article will get into the various aspects of adding a battery to your solar system, helping you understand its benefits, installation...

There are some options from Germany or Korea but the price is too high and the quality isn't better. As a customer, you usually get the choice to buy panels from Germany, but it will be pricey. Most people just want the most power for the best price, so you would have to go with Chinese panels, a Chinese inverter, and a Chinese battery.

Micro-inverters allow you to add panels later on if this is something you know you will do in the future (for example, if you know your extension with a nice big roof will be completed in a couple of years, but you need to add solar panels onto the main house now while scaffolding is up). These systems do not use a main inverter unit, but ...
