PXiSE software unlocks the potential of distributed generation to improve grid reliability and resilience, while increasing renewable energy output and helping ensure system balance and power quality.

The PXiSE DERMS helps utilities control the increase in renewable energy assets, batteries and electric vehicles. It coordinates both front-of-the-meter (FTM) and behind-the-meter (BTM) distributed energy resources (DERs) alongside traditional grid components on a single network through an integrated software platform that controls the dynamic two-way flow of energy.

PXiSE (pronounced "pice"), a member of the Yokogawa Group, develops next-generation grid control technology. PXiSE software solutions unlock the potential of distributed generation to improve grid reliability and increase renewable ...

The DER Management and Communication Platform helps utilities register, monitor, organize, and schedule the dispatch of customer distributed energy resources (DERs) including energy storage and solar PV via a cloud-native server running the IEEE 2030.5 standard protocol. Gain visibility and management of thousands of customer DERs.

Customer Goal . The operators at the Slate plant face the challenge of managing five individual utility-scale solar PV plants, each governed by its own power purchase agreement (PPA). These plants, part of one of the largest solar PV and battery storage sites in the U.S., interconnect at a single point of interconnection (POI). This project required a solution where the five individual ...

PXiSE Energy Solutions deployed the Renewable Power Plant Control technology to autonomously operate two battery energy storage systems, one 440 kW/224 kWh system and one 770 kW/776 kWh system, to store power generated from the solar panels and wind turbine and provide energy shifting and ramp control. ... a member of the Yokogawa Group ...

PXiSE Energy Solutions enthusiastically announces that effective January 1, 2023, Tim Allen has assumed leadership as President and CEO. Tim brings more than 22 years of experience across utility-scale solar, wind and energy storage projects, software controls, investor-owned utility, independent power producer and pure

Updated January 17, 2023. PXiSE Energy Solutions (PXiSE) is committed to keeping our visitors informed about how we use the information we gather on our website, at our mobile optimized website, our partner portal website and in our mobile apps (if any) (collectively, the "website").

In a previous study, Raytheon found that short duration Li-ion energy storage can be used in Department of Defense (DOD) microgrid installations to improve reliability and significantly reduce costs compared to all-diesel microgrids.. The project profiled in this case study builds on the previous one and demonstrates that a PXiSE Microgrid Controller, when coupled with a ...

Tokyo, Japan - December 2, 2021. Yokogawa Electric Corporation (TOKYO: 6841) announces it has acquired all of the outstanding shares of PXiSE Energy Solutions LLC., a San Diego-based developer of software that enables utilities and other grid operators to deliver reliable and stable power by managing renewables and distributed energy resources (DERs) in real time.

PXiSE Energy Solutions would like permission to contact you by email or phone (depending on the information you provided above) and if you agree, Energy Central will securely deliver your information to PXiSE Energy Solutions. If you choose to not share your information, you can still access this article or resource. ...
