The control system for the smaller microgrid will likely cost less in real dollars but consume more of the overall project budget than the control system for the larger one. "Your control system may be a little less [costly] in smaller ones, but it's going to be a much larger portion of the cost than in the larger one.

Emerson's microgrid controls solution, built upon the Ovation(TM) control system with an integrated microgrid controller, manages a microgrid's distributed energy assets to cost-effectively produce low-carbon electricity while maintaining grid stability and operational resiliency.

The issue arises when attempting to determine which controller will be most effective at curing current ailments. Is a microgrid controller best? Or perhaps a distributed energy resource management system (DERMS) would be better, or how about a local area distribution controller (LADC)? You are not alone. Controller confusion affects the best ...
