Thirty energy storage projects are planned to be implemented in the region by 2025.

How much energy does Iraq use?

About 90% of the energy consumption of Iraq is based on fuel; the rest is supplied by natural gas. According to IEA, the electricity demand in Iraq will increase with a 6% annual growth rate by 2030 and is expected to double to around 17.5 GW average per year.

Which ESS projects have been completed in the MENA region?

Completed ESS projects in the MENA region include pumped hydro-storage (PHS), which makes up 55% of the region's ESS installed capacity, and batteries, particularly sodium-sulfur and lithium-ion batteries, which are expected to grow from 7% to 45% of MENA's ESS by 2025. Pumped hydro-storage (PHS) projects and battery projects are the completed ESS projects in the MENA region.

What is ESS & how does it work?

Energy Storage System (ESS) is a technology that enhances power systems' flexibility and stability through capacity firming and ancillary services, such as frequency and voltage regulation. It is central to peak shaving -- leveling out peaks in energy use -- and can stack a spectrum of additional ancillary services.
