Should lithium ion battery storage be included in NFPA 13?

A push to include lithium ion battery storage in NFPA 13 prompted this study. It included tests of batteries and comparable general stored commodities in cartons when exposed to an ignition source. Kathleen Almand explains the rationale behind the tests as well as the testing procedures and the encouraging conclusions. Phase I

Can lithium ion batteries be protected in storage?

It lays out a research approach toward evaluating appropriate facility fire protection strategies. This report is part of a multi-phase research program to develop guidance for the protection of lithium ion batteries in storage.

What is Phase 1 lithium-ion battery hazard assessment?

Phase I Lithium-Ion Batteries Hazard and Use Assessment The first phase of the project, described in this report, is a literature review of battery technology, failure modes and events, usage, codes and standards, and a hazard assessment during the life cycle of storage and distribution.

What is a lithium-ion battery energy storage system (BESS)?

In recent years, companies have adopted lithium-ion battery energy storage systems (BESS) which provide an essential source of backup transitional power. UL and governing bodies have evolved their respective requirements, codes, and standards to match pace with these new technology developments.

Where can I find a report on Li-ion battery storage?
