

# What is the prospect of energy storage industry chain

What makes up the energy storage industry chain?

The energy storage industry chain consists of three main parts: the upstream, midstream, and downstream. The upstream includes suppliers of battery raw materials and electronic components. The midstream includes suppliers of battery systems, energy storage converters, energy management systems, and other accessories. The downstream includes energy storage system integrators and installers.

What is the market situation for energy storage?

The market situation for energy storage is different than for traditional generation. A storage device designed exclusively to provide ancillary services has no energy market based opportunity cost. As a result, if there is enough of this energy storage to completely supply the specific ancillary service needed, the market price collapses to zero.

How many Storage Startups are there in the energy industry?

We analyzed 200 storage startups in the energy industry. Six of them are our picks to watch out for: H2GO Power, Highview Power, Quidnet Energy, Aquion Energy, Solid Power, and Redflow. To learn more about the global distribution of these 6 and 194 other startups, check out our Heat Map!

Why do data centers need a high-temperature energy storage system?

Thermal storage and compressed-air energy storage (CAES) suit the region's hot climate and vast salt caverns, spurring exportable know-how in high-temperature storage designs. U.S. data centers could draw 6.7-12% of nationwide electricity by 2028, more than double 2023 levels.

How many GW of storage will China have in 2025?

Investment tax credits under the U.S. Inflation Reduction Act (IRA) unlocked 11.9 GW of storage additions in 2024 and a pipeline of 18.2 GW for 2025. Similar momentum stems from the EU Renewable Energy Directive III, which mandates higher renewables penetration, and China's long-duration storage targets that foster flow-battery innovation.
