Can energy storage system integrate into a wind farm?

An optimization capacity of energy storage system to a certain wind farm was presented, which was a significant value for the development of energy storage system to integrate into a wind farm. A high penetration of various renewable energy sources is an effective solution for the deep decarbonization of electricity production [1,2,3].

How does a wind farm work?

All the electricity from the wind farm without energy storage is sold to the grid and users. The annual revenue is 12.78 million US dollars. When integrating the energy storage plant, it stores the wind power when the electricity price is low, and releases it when the price is high.

Can a storage system be used in an offshore wind farm?

The assessment has also revealed the wider research of storage systems in onshore AC systems. This research allows for easier implementation of an ESS at the AC offshore collection system than in other DC connections at an offshore wind farm. However, some other options can be also interesting.

How much does a wind-storage system cost?

The optimal storage capacity is 38MWh when the charging and discharging efficiencies are 95%, the energy storage cost is 150 \$/kWh. The total annual income is calculated as 13.23 million US dollars from the wind-storage coupled system.

How much money does a simulated wind-storage system make?

When the energy storage system lifetime is of 10 years, and the cost is equal to or more than 375 \$/kWh, the optimization configuration capacity is 0 MWh, which means no energy storage installation. The annual revenue of the simulated wind-storage system is 12.78 million dollars, which is purely from the sale of wind generation.

Is a wind farm connected to the grid market?

A wind farm with an energy storage device is considered as a whole to be connected to the grid market. Firstly, the energy storage device stores abandoned wind generation to eliminate curtailment. Secondly, it stores wind generation when the price of electricity is pretty low.
